

Nicotine Fumigator

Botanical Pesticide

Nicotine fumigator is a broad spectrum pesticide of botanical origin. It is excellent for use in greenhouses for the control of thrips, aphids, whitefly, mealybug and spidermite.

This product combines the power of smoke fumigation with one of the most effective contact insecticides available.

When the can is ignited a large quantity of smoke is released and the active ingredients within the can vaporize, thus filling the greenhouse with their fumes.

Since the greenhouse is completely filled with the fumes there is no room for the insects within the greenhouse to hide. They come into contact with the vaporized active ingredient and succumb to it.

A lot of time, money and effort can be saved by using this product.
